

BEFORE IT'S TIME FOR CFD...

WE PROPEL YOUR DESIGNS CLOSER TO THE FINAL ANSWER

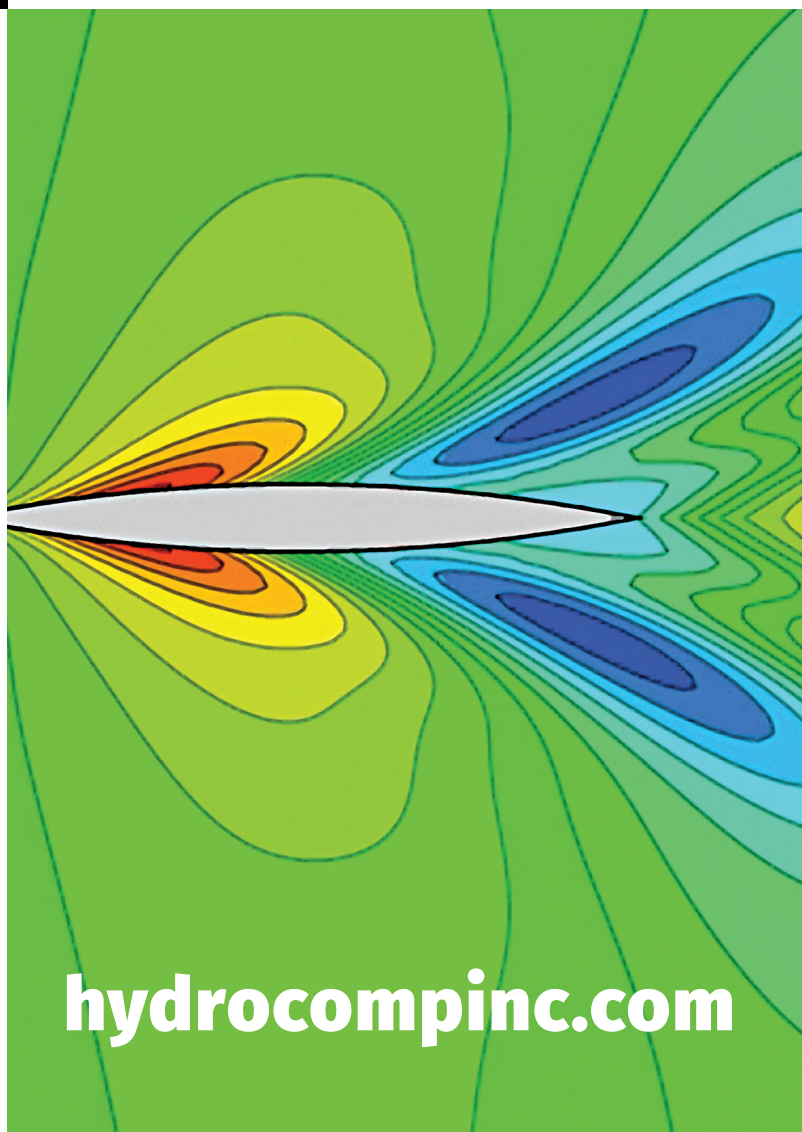

NavCad PREMIUM

PropElements®

For hydrodynamic design and analysis of ships and other marine vehicles, navy and coast guard design engineers turn to **NavCad Premium Edition** for the prediction of attainable speed and range, power demand, fuel consumption, even noise. For optimal propeller design, marine professionals pair NavCad with **PropElements** to obtain highest efficiencies.

NavCad and PropElements are both "gold-standard" software from HydroComp, Inc., used by over 700 maritime professionals including naval architects and marine engineers in over 30 countries. As systems engineering tools, NavCad and PropElements assist in the design and delivery of ships with superior fuel performance, reduced emissions, and improved hydroacoustics.

HYDROCOMP® Inc.

CAPABILITIES

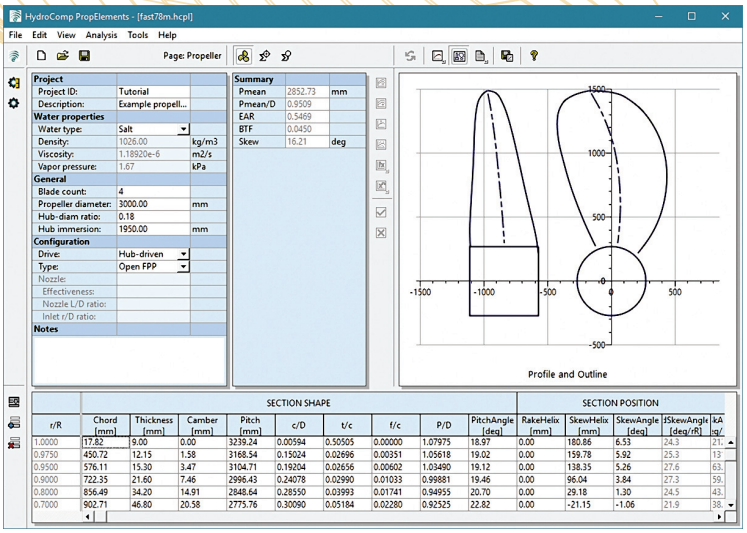

HydroComp: over three decades of hydrodynamic expertise in systems analysis of marine vehicles. Now available as a software asset for your design team.

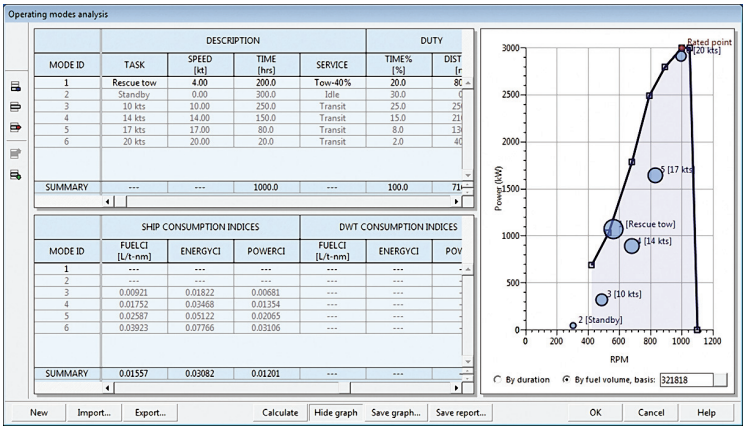

Achieve better operational efficiencies through:

- **Physics-based Systems Analysis**
  Less power = Reduced fuel = Fewer emissions
- **Optimize Maintenance Schedules**
  Choose when to clean propeller and hull.
- **Vessel Life Extension**
  Consider multi-fuel options or replacement of engine, gearbox, or propeller.
- **Energy Saving Devices**
  Optimize components, such as CRP, bulbs, stators.
- **Improve CFD Effectiveness**
  Preparatory analysis for benchmarking and design space optimization.

NavCad and PropElements: tools from a trusted and respected partner in hydrodynamics that help your fleet go further.

NavCad PREMIUM & PropElements®

Faster vessels • Quieter operations
Longer range • Less fuel
